Steamships

Project Type

Commercial Office - Retail

Year Completed

On going

Project Description

Kramer Ausenco is responsible for the structural & civil engineering design in this large and complex project. We engineered every aspect of the structural and civil works and provided supervision to ensure construction compliance. This building is situated on reclaimed land with a deep bored pier foundation and sheet piling along the sea boundary.

The two stages include over 18,000m² of Post Tension concrete slabs, providing more than 12,000m² of lettable space.

Basement, street and overwater car parks total 208.

Project Role

- Structural Engineer
- Civil Engineer
- Geotechnical Engineer
- Environmental Impact Assessment
- Construction Phase Attendance
