

Factsheet

AUSAID VSSE Project

Education

Project Title

Vanuatu Secondary School Ext. Project

Location

Efate Island, Vanuatu

Client

AusAID

Project Type

School Buildings

Year Completed

1999

Project Description

Kramer Ausenco's designs were to be a model for future schools throughout Vanuatu. The designs were aimed to make the most use of locally available materials, to be low maintenance and sturdy. The buildings were to be cost effective but still architecturally pleasing. The cost per m² was significantly less than previous school projects.

As part of the successful consultant team, Kramer Ausenco has been responsible for the site investigations, civil, structural and building services engineering, and for the local project management responsible for construction and procurement for the facilities.

Project Role

- Project Managers
- Structural Engineers
- Civil Engineers
- Mechanical Engineers
- Electrical Engineers
