

Factsheet

Fasito'o-uta, Manono-uta & Mulinu'u Seawall

Maritime

Project Title

Fasito'o-utam Manono-uta & Mulinu'u Seawall

Location

Apia, Samoa

Client

GoS, Ministry of Works

Project Type

Seawall Construction

Year Completed

2004

Project Description

The project involved three (3) phases of works which were undertaken concurrently and included the following;

Phase 1 – Structural reconstruction of approximately 784m of existing coastal protection measure to the Mulinu'u Peninsular. Works included the provision of improved drainage, concrete boat-ramps and a 1500 wide walkway esplanade with steps atop the new seawall.

Phase 2 – Structural reconstruction of approximately 815m of existing almost non-existent coastal protection measures to the foreshore at Fasito'o-uta. Works included the provision of improved drainage, concrete boat-ramps and foreshore access stairs

Phase 3 – Structural rehabilitation of approximately 4,169m of existing almost non-existent coastal protection measures to the foreshore at Manono-uta and Apolima-uta. Works included the provision of improved drainage and concrete boat-ramps.

Project Role

- Structural Engineers
- Civil Engineers
- Mechanical Engineers
